

RUST-X CLEANING MEDIA CL 002 Aluminum

RUSTX Manufactures specialized cleaning medias with rust preventive properties, de-greasing, de-watering & cleaning properties for aluminum components. The following are the features and advantages of the product:

Corrosion Prevention : The solution provides short term corrosion protection for up to 3 months on shop floor and prevents any corrosion development from finger marks

Dewatering : These are excellent de-watering agents and remove water from the surface or cavities of the component within 5 seconds of dipping of the component.

Degreasing: These are also effective in removing dirt, dust, greases, metal particles, cutting oils etc. The cleaning action is further enhanced in the Ultrasonic Machines, where the component as well as particles are vibrated with the help of ultrasonic waves

White Rust Removal: CL002 removes any white rust from the component by dissolving it within 10 seconds of dipping or spray washing with the cleaning media.

Leak Testing: CL002 is a transparent solution and can be used for leak testing in place of water as water left from leak testing may cause corrosion if not dried completely.

This material is non-hazardous and safe to use. It can also be used for multi-metal protection where brass, zinc plated, steel or copper fitments may be present on the component.

Property	Value
Kinematic Viscosity	<1 cSt
Specific Gravity	0.88
Flash Point of Medium	60 deg C/ 220deg C (medium/residue)
Engine Oil Compatibility	Pass (ASTM B 6557)
Coverage	300 sq meter
Effective Film Thickness	< 0.5 microns
Rust Protection	3 months in indoor storage 2 years in VCI packaging
